Education

University College London Computer Vision (Distinction - avg. 85%) *London, UK* *Sep. 2021 - Sep. 2022*

- **Relevant Modules** Networked Systems, Machine Learning for Visual Computing, Image Processing, Machine Vision, Computer Graphics, Perception and Interface, Robot Vision and Navigation, and Virtual Environment.

University of Manchester Artificial Intelligence (Distinction - avg. 83%) *Manchester, UK* *Sep. 2018 - Sep. 2021*

- **Relevant Modules** Mathematics, Operating System, Algorithms and Complexity, Databases, Logic and Modelling, Software Engineering, Imperative Programming, Object-oriented Programming, Machine Learning and Optimization, AI and Games, Computer Vision, Graphics and Image Processing, Distributed Computing, Mobile System, and Cryptography.

Bellerbys College Computing (1st in cohort - avg. 84%) *Brighton, UK* *Jan. 2018 - Jun. 2018*

- **Relevant Modules** Decision & Pure Maths, Databases, Programming & Code, Web Design, and System Analysis.

Experience

Microsoft Software Engineer IC3 - c# *Nov. 2024 - Current*

- Azure Fabric Data team. Developing data streaming systems behind PowerBi which serves millions of customers worldwide.
- Built, integrated, and presented an AI Agent development workflow to teams.

Cisco Software Engineer - Java & Go & Typescript *Oct. 2022 - Sep. 2024*

- Integrated external services and applications in cloud environments (AWS and Azure), reducing manual steps by up to 60%.
- Worked with teams to move authentication and authorization services from self-hosted to cloud-managed databases, ensuring a smooth transition.
- Led the development of AWS Terraform plugins for Cisco Cloud, gaining hundreds of users in the initial release.
- Designed and implemented external platforms, developing key public APIs, attracting hundreds of thousands of requests during beta release. Link: (Cisco Defense Orchestrator Documentation).
- Developed an easy-to-use internal rate limit library, used by several internal applications.

Amazon Software Engineer Internship - Java *Jun. 2021 - Sep. 2021*

- Built and embedded an experiment framework into the existing question-answering pipeline. Conducted experiments with 1% customer traffic, and presented a highly-rated proof-of-concept report.
- Developed an efficient workflow for future experiments, and reduced experiment deployment time needed from days to hours.
- Received full-time offer (Organization wide layoff).

Amazon Software Engineer Internship - Java *Jun. 2020 - Sep. 2020*

- Developed procedures that aggregate ≈3 billion item records into concise datasets daily using tools based on Spark.
- Reduced time-consuming ad-hoc graph analysis from minutes to seconds by developing an effective modern visualization dashboard using Elastic Search and Kibana.
- Developed an API package for automating the creation of visualization components and dashboards.
- Received full-time offer.

Events

Win-a-Mac Hack (Agentic Edition) 2nd Place *Mar. 2026*

- Encode Club. Built “AI Storyboard Dungeon”, a multi-agent system where AI personas with distinct personalities debate and collaboratively generate visual storyboards in a real-time 3D environment.

Cambridge AI RealityX Hackathon 2026 1st Place *Mar. 2026*

- Medical Healthcare Track. Built “Mind The Gap”, an AR-based post-stroke rehabilitation coach using pose detection and 3D body models (SMPL-X) to guide patients through recovery exercises at home.

Agentic AI Hackathon 2nd Place *Dec. 2025*

- SpoonOS and Neo challenge. Built AI an agent called CoSign.ai acting as a service layer to verify payments are authentic and secure.

London AI Hackathon 2025 2nd Place *Feb. 2025*

- Encode Club. Created tutorials on deploying and building with SpoonOS with AI.

University of Manchester Software Engineer Mentor *Oct. 2022 - Current*

- Mentored a group of 8 second year undergraduate students as they contribute to a open source project on a yearly basis.
- Received positive feedback from students and faculty members.

NoGhost Data Researcher - Python *Jun. 2022 - Sep. 2022*

- Built multi-processing data pipeline, improved and implemented state-of-the-art machine learning papers.
- Part of Masterś degree project at UCL, condensed a thesis received distinction grade, rated by engineers and professors from UCL.

Java Community Process Associate Member *Mar. 2023 - Current*

- Participate as a Contributor to JSR and enhance Java knowledge.

Selected Projects

AI-Powered Business Websites Next.js, React, TypeScript, Tailwind CSS, Three.js, Framer Motion, Vercel *2025 - Present*

- Utilized AI to build production websites for local companies, including a MedTech startup showcasing 3D needle-tip tracking technology for ultrasound-guided procedures, and a childcare nursery with contact forms, responsive design, and email integration.

CellNext – 3D Jewelry Designer Next.js, TypeScript, Rust, WebAssembly, WebGL *2025 - Present*

- A web-based 3D cellular jewelry mesh designer with a custom Rust/WASM engine for topology generation, physics simulation, 2D→3D transform, mesh generation, and Catmull-Clark subdivision. Link: https://cells.lossgrad.com/.

PBM – AI Property Compliance Platform Next.js, TypeScript, Supabase, OpenAI, GoCardless, Vercel *2025 - Present*

- Full-stack AI-native SaaS for property compliance management. Features include AI-powered document QA chat, automated compliance task generation with scoring, property/tenancy document tracking, OAuth authentication, and payment processing.

Nvwa – AI Newsletter Aggregation Python, Next.js, Azure OpenAI (GPT-4o), Azure Cosmos DB, HDBSCAN *2025 - Present*

- AI-powered content aggregation and email digest platform. Multi-stage filtering pipeline (linguistic heuristics, sentiment analysis, semantic density, LLM validation), semantic clustering via HDBSCAN, and GPT-4o summarization. Scrapes Reddit, HackerNews, and X/Twitter. Deployed on Azure Container Apps.

Personal Website HTML/CSS, Typescript, and GLSL *Sep. 2021 - Present*

- Implemented features: (1) RSS feed backed by CORS proxy server deployed with AWS Lambda. (2) Automated integration using Github Actions. (3) Integrate external Anime API and built search and details page. (4) 3D landing page built with ThreeJs and custom shaders. (5) Modern, responsive, mobile-friendly CSS. (6) Search engine optimzation.
- link: https://wll.dev
- Project can be found at https://github.com/weilueluo/personal-site.

Collaborate Live HTML/CSS, and Javascript *Jan. 2019 - Mar. 2019*

- Led 7 students to build a web application for a code-based interview. Features include real-time coding, drawing, compliation and terminal.
- Awarded 1st place in most appealing idea and highest technical quality prize (2/4 prizes) out of 37 teams.

Local Nameserver Python *Feb. 2022 - Mar. 2022*

- Written a local nameserver that able to resolve any IPv4 address according to RFC 1034 and RFC 1035 specification.

Poisson Image Editing Sole Developer - Python *Dec. 2021 - Jan. 2022*

- Implemented the Poisson Image Editing paper. Including techniques such as naive filling; import & mixing gradient; texture flattening, colour isolation & illumination. The project can be found at *https://github.com/Redcxx/poisson-image-editing*.

MP3 Music Player & Flight Management System Java *Mar. 2019 - Jun. 2019*

- A MP3 player with GUI and custom database, supports functionalities such as play, pause, restart, and upload custom songs.
- A flight management system with GUI and custom database, supports functionalities such as booking, reschedule, cancel and swap flights.
- One of three students who managed to complete this coursework over past 5 years.

Skills

Programming	(>10k lines) Java,Go,Typescript/Javascript,Python,HTML/CSS;(>2k lines) Matlab,C,GLSL.
Tech Stack	Spring,GraphQL,OpenAPI,NodeJs,Jenkins,Angular, ReactJs,ThreeJs,NextJs,SASS/SCSS,.
Environments	Git,CR,CI/CD,AWS,Terraform,Scrum,Agile,Markdown,Linux/Windows,LaTeX.
Language	(Native) Chinese and Cantonese;(Fluent) English;(New) Japanese
